Title:

“Immediate Extraction Socket Management in the Esthetic Zone and Molars What we know, what we think we know, and what we don’t know about”

The Fairmont Hotel

Friday, February 28, 2020

9:00am – 12:00pm – 3 units

Course Description:

Immediate placements of implants into extraction sockets is an exciting treatment alternative for our patients. However, there are many potential short and particularly long term risks which the practitioner must be fully aware of. This presentation will focus on the potential problems and benefits both clinically and biologically when the choice of immediate socket placement is made for single and multiple sites. This will be an evidence based presentation that will be objective about the best and simplest way to treat these types of cases.

Objectives:

- 1) Identify what type of healing takes place against the implant in immediate socket placement. Know how to minimize recession with immediate provisionalization
Know the proper crown contour for immediate provisionals
- 2) Know if the gap distance really matters. Know if primary closure should be attempted or should it be left open? Know if membranes should be utilized?
- 3) Know what type of graft material if any should be utilized? Identify what are the potential short and long term risks involved with immediate placement of implants?

Title:

“Interdisciplinary Approach for Treating the Esthetically Compromised Patient”

Friday, February 28, 2020

2:00 – 5:00pm – 3 units

Course Description:

The treatment planning of complex cases requires the highest level of knowledge and skill of the treating team. It is an orchestration of procedures including proper sequencing and timing that makes the difference. An envisionment of the final case before starting is required to know where the goal of treatment will be directed. This, in conjunction with the patients needs and clinical situation comprise the decision-making process for what is the best treatment for the patient. These concerns will be addressed in this interdisciplinary approach to our most challenging cases.

Objectives:

- 1) Which teeth to save or extract? Should implants be placed immediately or in a delayed protocol? Should multiple implants be placed in the aesthetic zone?
- 2) When and how to include orthodontics if needed for sight development. Should pink ceramic be used or should ridge augmentation be performed? Should the case be splinted or broken up into separate bridges or individual teeth?
- 3) How to provisionalize the case throughout treatment. When to immediate load cases versus do a serial extraction case

Short Bio:

Dennis P. Tarnow is currently Clinical Professor of Periodontology and Director of Implant Education at Columbia School of Dental Medicine. He is the former Professor and Chairman of the Department of Periodontology and Implant Dentistry at New York University College of Dentistry. Dr. Tarnow has a certificate in Periodontics and Prosthodontics and is a Diplomat of the American Board of Periodontology. He is a recipient of the Master Clinician Award from the American Academy of Periodontology, Teacher of the Year Award from New York University and Distinguished Lecturer Award from the American College of Prosthodontists in 2015. Dr. Tarnow has a private practice in New York City, and has been honored with a wing named after him at New York University College of Dentistry. He has published over one hundred seventy-five articles on perio-prosthodontics and implant dentistry and has coauthored three textbooks including one titled Aesthetic Restorative Dentistry. Dr. Tarnow has lectured extensively in the United States and internationally in over forty-five countries.
